

# EXAM 1

Math 102, Spring 2008-2009, Clark Bray.

You have 50 minutes.

No notes, no books, no calculators.

YOU MUST SHOW ALL WORK AND EXPLAIN ALL REASONING  
TO RECEIVE CREDIT. CLARITY WILL BE CONSIDERED IN GRADING.

Good luck!

Name \_\_\_\_\_

ID number \_\_\_\_\_

1. \_\_\_\_\_

2. \_\_\_\_\_

3. \_\_\_\_\_

4. \_\_\_\_\_

5. \_\_\_\_\_

6. \_\_\_\_\_

7. \_\_\_\_\_

“I have adhered to the Duke Community  
Standard in completing this  
examination.”

Signature: \_\_\_\_\_

Total Score \_\_\_\_\_ (/100 points)

1. (15 pts)

Find the complete set of solutions to the system of equations below.

$$\begin{array}{rcccccc} 1x & + & 2y & + & 6z & = & -8 \\ -1x & - & 2y & - & 4z & = & 4 \\ 2x & + & 4y & + & 10z & = & -12 \end{array}$$

2. (10 pts) Let  $A$  denote the (non-augmented) matrix of coefficients for the above system. Use the row reduction process from the above problem to compute the determinant of  $A$ .

3. (10 pts) Suppose we wish to find a vector  $\vec{b}$  for which the system  $A\vec{x} = \vec{b}$  has no solutions. Write such a vector as a product of elementary matrices and another vector  $\vec{c}$ , but do not multiply out the product. Make sure to explain exactly where you got those elementary matrices and how you chose the vector  $\vec{c}$ .

4. (15 pts) Find the equation of the unique plane that contains the point  $(1, 2, 0)$  and is perpendicular to the line described parametrically by

$$\vec{x}(t) = (3 - 4t, 2 + 3t, t - 2)$$

5. (20 pts) We define the “component of  $\vec{v}$  along  $\vec{w}$ ” (written “ $\text{comp}_{\vec{w}}(\vec{v})$ ”) to be the length of the projection of the vector  $\vec{v}$  onto the line pointing in the direction of the vector  $\vec{w}$ . Show that if  $\vec{u}$  is a unit vector, then

$$\text{comp}_{\vec{u}}(\vec{v}) = \vec{u} \cdot \vec{v}$$

*(Hint: First write this component with trig in terms of the angle between the two vectors.)*

6. (15 pts) Suppose we have

$$A = \begin{pmatrix} 2 & 6 \\ 1 & 3 \end{pmatrix} \quad \text{and} \quad B = \begin{pmatrix} 3 & 6 \\ 3 & 5 \end{pmatrix}$$

Compute the following.

(a)  $AB$

(b)  $\text{rank}(A)$

(c)  $B^{-1}$
