List of Figures **v**

Index of symbols **vi**

Preface **1**

1 Alexander duality **5**
- 1.1 Generators versus irreducible components 6
- 1.2 Examples of Alexander dual ideals 9
- 1.3 Matlis duality and order lattices 13
- 1.4 Finitely determined modules 16
- 1.5 The Čech hull and categorical equivalences 18
- 1.6 The Alexander duality functors 20

2 Monomial matrices **23**
- 2.1 Motivation and definition 23
- 2.2 Injective modules and complexes 26
- 2.3 Cellular monomial matrices 27
- 2.4 Minimality 30

3 Duality for resolutions **32**
- 3.1 Generalized Alexander duality 32
- 3.2 Artinian local duality 34
- 3.3 Operations on monomial matrices 37
- 3.4 Duality for resolutions 40
- 3.5 Examples of duality for resolutions 42
- 3.6 Localization, restriction, and duality 44

4 Applications of duality **47**
- 4.1 Projective dimension and support-regularity 48
- 4.2 Duality for Bass and Betti numbers 52
- 4.3 LCM-lattices 55
- 4.4 Equivariant K-theory: the Alexander inversion formula 57

5 Cellular resolutions **59**
5.1 Duality and cellular resolutions 59
5.2 The cohull resolution 65
5.3 Genericity 72
5.4 Cogenericity 76
5.5 Planar graphs 79

6 Local cohomology **87**
6.1 The canonical Čech complex 88
6.2 Hilbert series and module structures 94
6.3 Greenlees-May duality 97

Bibliography **103**
